

B2
3. (Amended) The television of Claim 1, wherein said processor is configured to receive query compliance status information identifying if said television is setup to share queried information with the other television.

B3
7. (Twice amended) A communication system comprising a plurality of televisions interconnected together, wherein said televisions are configured to provide query information requesting information identifying at least one of content and channel currently watched on at least one other of said plurality of televisions and are configured to automatically provide queried information identifying at least one of content and channel currently watched in response to a query request from said others of said plurality of televisions.

8. (Amended) The communication system of Claim 7, wherein each of said plurality of televisions is configured to receive query compliance status information identifying if said each of said plurality of television is setup to share queried information with each other of said plurality of televisions.

B4
12. (Twice amended) A method of providing communications between a plurality of televisions, said method comprising:

a. sending a query request from any of said plurality of televisions to any other of said plurality of televisions requesting information identifying at least one of content and channel currently watched, and

b. sending queried information identifying at least one of content and channel currently watched from said any other of said plurality of televisions to said any of said plurality of televisions that sent the query request automatically in response to said query request.

BA
Concl.

14. (Amended) The method of Claim 13, wherein said identifying comprises identifying a query compliance status between each of said plurality of televisions identifying if each of said plurality of television is setup to share queried information with each other of said plurality of televisions.

B5

16. (Amended) The method of Claim 12, comprising confirming a query compliance status of said any of said plurality of televisions that sent the query request prior to performing act b and not sending queried information if said query violates said query compliance status, wherein said query compliance status information identifies if said any other of said

B6

B6. televisions is setup to share queried information with said any
of said plurality of televisions.

Please add Claims 19-20 as follows:

19. (New) A television comprising:

a connection configured to be operatively coupled in a
peer-to-peer connection of an other television; and

B7 a processor configured to request information identifying
at least one of content and channel currently watched on the
other television and configured to automatically provide
information identifying at least one of content and channel
currently watched at said television in response to a query from
the other television.

20. (New) A communication system comprising a plurality of
televisions interconnected together in a peer-to-peer
connection, wherein said televisions are configured to request
information identifying at least one of content and channel
currently watched on at least one other of said plurality of
televisions and are configured to automatically identify at
least one of content and channel currently watched in response
to a query from said others of said plurality of televisions.
